

Arc of Knowledge : A library Bridging Earth and Sky

Standing atop the gently sloping roof, visitors are immersed in a panoramic view of the surrounding forest. The canopy unfolds like a living, breathing horizon, creating a sense of both openness and intimacy. This elevated perspective blurs the boundary between the built environment and nature, offering a moment of peace and connection as visitors tread lightly along the arc.

Viewed from above, the library appears as an elegant curve, echoing the natural contours of the forest floor. Its flowing design seamlessly integrates with the landscape, leaving minimal disruption to the surrounding ecosystem. The 270-degree arc embraces the woods, drawing the eye to its harmonious interplay between architecture and nature.

Inside, the library invites visitors into a world of light and warmth. The curved form creates a dynamic flow of space, with high ceilings and carefully positioned windows that filter sunlight through the trees. The interplay of shadows and light mirrors the dappled forest outside, making the interior a serene retreat for reading, reflection, or quiet exploration.
